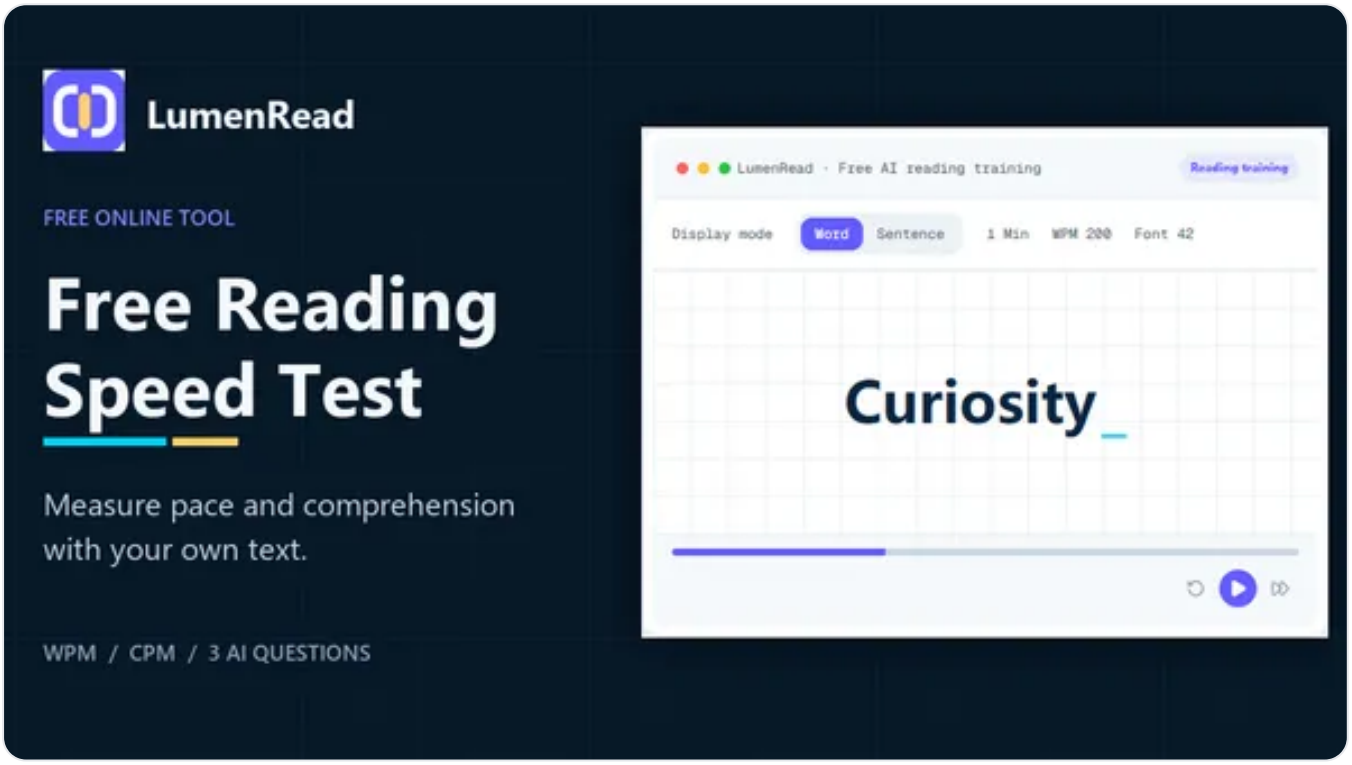
LumenRead

Free AI reading speed test using your own text, with comprehension questions and instant WPM results.



About

LumenRead is a free AI reading speed test that measures how quickly you read and how well you understand the text. You can paste your own article, upload a TXT or Markdown file, or use a reviewed sample, then get instant reading speed results along with three AI-generated comprehension questions. The tool is built for no-account testing, and it keeps the original text off the server while still showing speed, completion, and understanding together.

What is LumenRead

LumenRead is a free AI reading speed test built around your own text instead of a fixed

report characters per minute when that fits the material. The app goes beyond a basic timing tool by generating three comprehension questions from the text you actually read, so the result reflects both speed and understanding.

The experience is designed to stay on one page from start to finish. You can begin a reading assessment without creating an account, and the site presents itself as AI-powered and free. According to the product copy, the original file is not stored on the server, and reading content is not kept in logs or permanent storage.

Key features

- Uses user-provided material: paste an article, upload a plain-text TXT or Markdown file, or select a reviewed sample.
- Combines pace and comprehension: the test reports reading speed plus three AI-generated questions about facts, inference, and the main idea.
- Supports guided reading modes: choose word mode or sentence mode and set a target pace.
- Tracks active reading time: only visible reading time counts, and switching tabs pauses the timer so idle time does not inflate results.
- No account required: you can complete the full flow without sign-up.
- Private-by-default handling: text is sent once to the AI service to generate questions, while the original file is not stored on the server.
- Honest fallback behavior: if the AI questions fail, speed and completion results remain available.
- Instant feedback: results appear right after the test, without waiting for a manual review.

How to use it

- Open the test page and choose your reading text.
- Paste text directly, upload a TXT or Markdown file, or pick a reviewed sample article.
- Select how you want to read: word mode or sentence mode.
- Set a target pace so the reading flow matches the test you want to run.

- Finish the session and review your speed result plus the three AI-generated comprehension questions.
- If you want a fresh run, clear local test data before starting again.

The setup is useful if you want a realistic reading assessment rather than a generic benchmark. Because you can bring your own article, the passage can match your subject area, difficulty level, or daily reading habits.

Who it is for

LumenRead works well for readers who want a practical speed-and-comprehension check instead of a pure stopwatch. It is a fit for:

- Students who want to compare reading pace on class material.
- Teachers or tutors looking for a quick comprehension-aware reading exercise.
- People who want to practice reading faster without losing understanding.
- Anyone testing how quickly they read articles, notes, or Markdown text.
- Users who prefer a no-sign-up browser tool for a one-off assessment.

The product is especially relevant for English reading practice, since the site specifically mentions WPM reporting for English text. If your goal is to see how speed changes with different text types, using your own article or file gives a more personal benchmark than a generic sample passage.

What to know before you use it

LumenRead is a web-based reading assessment tool, but it is not a substitute for a clinical evaluation, an educational diagnosis, or a professionally validated literacy test. The AI-generated questions are tied to the text you provide, so they are useful for practical comprehension checking, yet they are still dependent on the quality of the source text and the AI service.

A few limits are important:

- The site says text is sent once to the AI service to generate questions, so you should avoid pasting sensitive material unless you are comfortable with that processing step.

secrecy in every system layer.

If the AI question step fails, you still get speed and completion information, but the comprehension portion may be unavailable for that run.

English text is explicitly mentioned for WPM reporting; other languages or scripts may not be handled the same way.

The tool focuses on speed, completion, and three comprehension questions. It does not claim to replace spaced-repetition systems, reading coaching, or full-length academic assessments.

For official records, graded coursework, or situations where exact scoring rules matter, use the institution's own testing method or source material. For everyday reading practice, quick self-checks, and article-based speed measurement, LumenRead gives a simple way to test reading speed and understanding in one session.
